In prior art magnetic tape recording/playback apparatus, a reproducing or playback magnetic head is generally placed close to a recording magnetic head so that signals are generally transferred magnetically from the recording head to the reproducing head. In that system, the tape must be kept in the direct or unidirectional path between the two heads. When the tape is changed from the recording to the reproducing direction, the magnetic heads must be moved apart from each other. This requires additional time and apparatus for replacing the tape from one direction to another. Prior art U.S. Pat. No. 3,564,214 and U.S. Pat. No. 3,822,500, issued to Miyagawa et al, which patents are incorporated herein by reference, describe apparatus for recording and playback of signals to and from a magnetic recording medium. These patents disclose that the magnetic medium can be moved out of the direct magnetic path between the two heads. More specifically, the magnetic head elements are movable with respect to the medium, and the medium is moved in a helical or spiral path about the head elements. The apparatus disclosed in the above-mentioned prior art patents, U.S. Pat. Nos. 3,564,214 and 3,822,500, is an improvement over a prior art tape recorder system wherein a magnetic tape 77a5ca646e
